Zyvor Platform

Physical hypervisors, metal provisioning, and cluster bootstrap

hypercluster v0.1.0 · zyvor.dev · ssahani portfolio

Foundation products

Product	Role	Port
hypercluster	Day 0 K8s bootstrap — Kubespray + k3s	CLI
machina	libvirt/KVM hypervisor management	:5092
zyvor-fabric	systemd-vmspawn private cloud	:8443
IronWolf	Metal3 bare-metal automation (24 CRDs)	:8888

hypercluster workflow

- `cluster.conf` → preflight → deploy → test → kubeconfig
- k3s path: Cilium → cert-manager → MetalLB → KubeVirt/CDI
- `forge-handoff --json` for Day 2 Forge import

Physical layer choice

machina

Enterprise libvirt/QEMU/KVM — 40+ web pages, fleet controller, VNC/SPICE consoles.

zyvor-fabric

systemd-native alternative — vmspawnd daemon, vmctl apply YAML, 480+ REST endpoints.

IronWolf

Metal3 extension — firmware profiles, BMC reconciler, ClusterClaim scheduling.

When to use which

- libvirt-centric ops → machina
- systemd-native lightweight cloud → zyvor-fabric
- Bare-metal fleet with BMC → IronWolf → hypercluster
