Zyvor Platform

Bottom-up dependency stack — foundation to intelligence

hypercluster v0.1.0 · zyvor.dev · ssahani portfolio

Layer model

Lower layers provide compute, storage, and networking; upper layers add orchestration, UX, and intelligence.

Layer	Products	Runtime
0 — Physical	machina · zyvor-fabric · IronWolf	Linux host, systemd
1 — Bootstrap	hypercluster	Ansible, k3s, SSH
2 — Cloud control	v9s · VMRogue · ragnarok	In-cluster + sidecar APIs
3 — AI infra	forge	K8s operators + microservices
4 — Applications	hermes	K8s controller + Rust gateway
5 — Migration	hypersdk · hyper2kvm · guestkit · Aether	Host daemon + CLI
6 — Network intel	packetwolf	DaemonSet + host CLI

Layer 0 → Layer 6 dependency flow

Key abstractions

Unified Workload Spec

Aether — one YAML across Podman, K8s, KubeVirt, Metal3

VeyronVM CR

VMRogue — declarative VM with GitOps export

ClusterClaim

IronWolf — bare-metal allocation with topology scheduling

Application Gateway

Hermes — /a/{{ns}}/{{app}} stable URLs

Cross-layer integration via kubeconfig handoffs and REST APIs
